SILHOUETTE

STAND

VAMPIRE SHADOW CASTER Page 2

WHAT YOU'LL NEED: Scissors, a small utility knife, glue and a flashlight.

INSTRUCTIONS:

Print out page 1. Use the scissors and utility knife to cut out the silhouette and the stand. Fold the stand along the black line and then glue the stand to the back of the silhouette, as shown in Figure 1. You're Shadow Caster is now finished! Set it on a tabletop and enjoy.

You can use a flashlight to cast large eerie vampire shadows, as shown in Figure 3. This is particularly effective if you hide the Shadow Caster and flashlight from view, so only the shadow is seen.

You can also cast vampire shadows using a tea candle in a glass jar. Set the Shadow Caster a couple of feet in front of the wall and then place the jar and candle about six inches in front of the Shadow Caster, as shown in Figure 4. Turn off the room lights and move the Shadow Caster and glass jar a few inches back or forth to control the size of the shadow.

Safety Note: Candles should be used only under adult supervision, and should never be left unattended.

Above is the original shadow from the 1922 film *Nosferatu*.
